Letter of Recommendation for Liad Or

To whom it may concern,

I am pleased to recommend Liad Or, an undergraduate student in Electrical Engineering and Physics who joined my research group at Bar-Ilan University in 2025. Liad approached me on his own initiative, motivated by an interest in experimental research and a desire to gain hands-on experience in a physics laboratory.

During his time in my group, Liad contributed to two experimental projects involving wave propagation in complex systems. I appreciated his willingness to engage with unfamiliar problems, his practical approach, and his ability to work independently while seeking advice when needed.

His first project concerned the dynamic cloaking of a diamond-shaped hole in an elastic plate. Starting from a published study, Liad developed a numerical model of the system and reproduced the wave propagation simulations. He then moved to the experimental implementation, assembling and programming the measurement setup and working with a structured elastic plate to reproduce the reported results. This project required him to move between numerical simulations, physical concepts, and experimental instrumentation, and he handled these different aspects with considerable autonomy.

In a second project, devoted to wave propagation and Anderson localization in a tube system, Liad contributed to the development and automation of the experimental setup. In particular, he configured and programmed a vector network analyzer, improving the efficiency of data acquisition and significantly reducing measurement times. He also developed visualization tools to analyze the experimental data, helping to identify different propagation modes and signatures of wave localization.

What I particularly appreciated about Liad was his willingness to take responsibility for concrete tasks and follow them through. He is resourceful, learns quickly, and does not hesitate to explore technical solutions on his own. He also integrated well into our international research environment, interacting naturally with graduate students and researchers.

Bar-Ilan University, Ramat-Gan, 5290002 Israel

For an undergraduate student, Liad has gained valuable experience in experimental physics, numerical modeling, and instrumentation. His work in my laboratory has given me a positive impression of both his technical abilities and his attitude toward research.

I am happy to recommend Liad for an R&D engineering position or further graduate studies. I believe he has the skills, motivation, and practical judgment to develop into a capable researcher or engineer.

Sincerely,

Prof. Patrick Sebbah
